UNIVERSAL COLLEGE OF PARAÑAQUE

College of Information and Technology

APPROVAL SHEET

In partial fulfillment of the requirements for the degree of Bachelor of Science in Information Technology, this capstone project entitled “**A Proposed Website and Reservation System For Three J’s Resort**” has been prepared and submitted by **Justiza, Jason Marc M., Lopez, Ralph Ranier S., Pagharion, Jose Alberto D., and Salongcong, Alan Jr. L.**, are hereby recommended for oral examination.

Engr. Jennelyn P. Cabale
Capstone Project Adviser

Approved by the committee on oral examination with the grade of _____.

Engr. Johner P. Pescadera
Panel Chairman

Engr. Kimberly Gaysis
Panel Member

Engr. Mary Ann P. Joaquin
Panel Member

Engr. Virgilio V. Doza
Panel Member

Ms. Ailene De Leon
Panel Member

Accepted and approved in partial fulfillment of the requirements for the **Bachelor of Science in Information Technology** degree.

Engr. Virgilio V. Doza
College Dean

ACKNOWLEDGEMENT

We would like to express our deepest gratitude to everyone who has supported and guided us throughout the journey of our capstone project. Firstly, we extend our heartfelt thanks to our capstone project adviser, Engr. Jennelyn P. Cabale, for her invaluable guidance, insights, and encouragement. Her expertise and constant support have been instrumental in the successful completion of this project.

We are also grateful to the owner of Three J's Resort, the Pagharion family, for providing us with the opportunity to collaborate on this capstone project. Their cooperation and willingness to share resources and information have been crucial to our research, development, and implementation process.

Our sincere appreciation also goes to Mr. Gerard Ramos and the entire CIT department for their continuous support and for creating an environment that fosters learning and innovation. Their assistance and resources have been a significant asset to our project.

Lastly, we acknowledge ourselves for the dedication, hard work, and teamwork we have demonstrated. Our collective efforts and commitment have been the driving force behind the successful completion of this project.

Thank you all for your unwavering support and belief in our capabilities.

Chapter 1

INTRODUCTION

This chapter introduces the study's context by highlighting the necessity for research. It then delves into the theoretical framework and conceptual paradigm employed as guiding principles. Furthermore, the chapter outlines the problem statement, delineating the challenges explored, and the study's objectives. Lastly, it discusses the study's scope and limitations, indicating the boundaries within which the research operates.

1. Background of the Study

A deep dive to the exciting journey of Three J's Resort, a vacation haven along the beach and near the vibrant cityscape of Metro Manila. In today's world, defined by digital convenience and efficiency, Three J's Resort is starting to adapt. The creation of Three J's Resort's own website with an integrated reservation system. This proposed website and reservation system will have a significant milestone in the resort's timeline. A dedication to deliver exceptional service and creating unforgettable memories to the guests.

Established by the Pagharion family in late 2010, the Three J's Resort was envisioned as a peaceful place to relax and unwind, giving a break from the city life. Located close to the beach coast and not too far from Metro Manila, Three J's Resort quickly became popular among travelers that are looking for a peaceful and stress-free environment.

Three J's Resort underwent a remarkable change over time, continually expanding its amenities and services to cater to the current trends in resorts. From its humble beginnings as a seaside retreat, the resort has developed into a premier

destination renowned for its exceptional hospitality and breathtaking views along the beach.

While Three J's Resort is close to achieving its total completion, the resort is ready to set higher standards. This endeavor emphasizes Three J's Resort's commitment to elevate the guest's satisfaction and crafting unforgettable memories for every guest.

Three J's Resort recognizes the importance of using advanced technology to make things smoother and give guests a better experience. The proposed transition from a manual reservation system to a website featuring an integrated booking platform represents a step forward in their journey. With the proposed website and reservation system, Three J's Resort aims to simplify the booking process, mitigate errors, and allow guests greater flexibility and convenience in planning their upcoming vacations.

As Three J's Resort enters a new era of technology and innovation, the researchers and the owner of Three J's Resort are committed to provide exceptional hospitality and unforgettable moments for the guests. With our proposed website and reservation system, we all together are ready to revolutionize the guest experience and set new standards.

2. Theoretical Framework

The conceptual paradigm was composed of input-process-output of the proposed system and how it flows. The researchers will use PHP, HTML, CSS, MySQL, and JavaScript as software requirements. The researchers will create a website with a reservation system for staff to easily showcase the resort and input the reservation information including the guest's data, reservation date, time, and preferred room.

3. Conceptual Paradigm

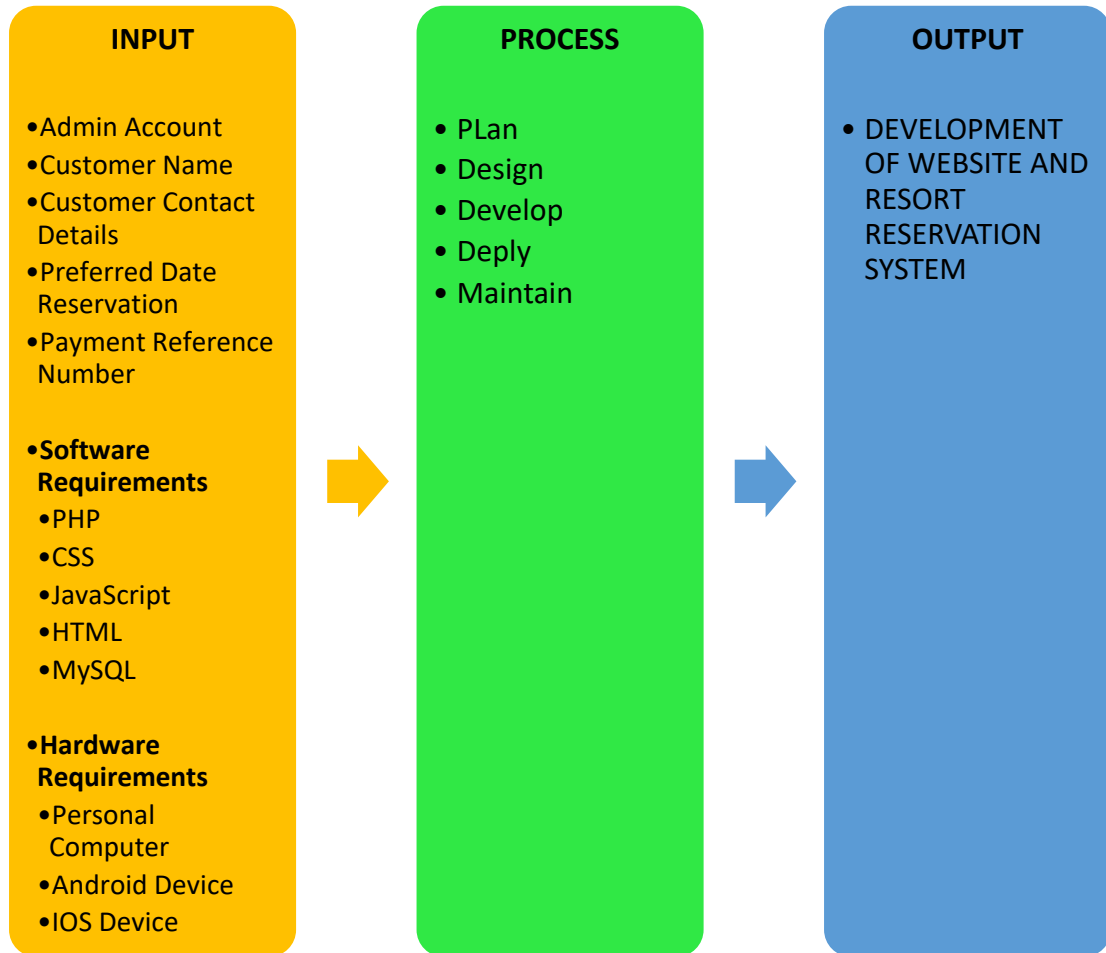

Figure 1. Hierarchical Input-Output Process

4. Statement of the Problem

The manual procedures in reservation processes in some resorts have led to inefficiencies, booking errors, and missed revenue opportunities. Manual reservations often have difficulties for guests to make, while resort staff face challenges in managing reservation details, resulting in bad guests experience and income loss. The shift from manual to automated website reservation systems in the

resort business raises questions about its effectiveness and impact. This capstone project aims to explore the challenges and benefits of this transition, focusing on how it affects operational efficiency, staff and guest experiences, and overall profitability and satisfaction in resort management.

The challenge lies in designing a robust system that integrates necessary features while ensuring it operates smoothly across various devices and software environments. Additionally, achieving high levels of user satisfaction and adoption poses a critical objective, necessitating thorough usability testing and feedback integration throughout the development lifecycle:

1. Functionality
2. Compatibility
3. User Acceptance

5. Objectives of the Study

1. General Objective

To develop a website and reservation system for Three J's Resort that improves booking experience for visitors and streamlines business operations.

2. Specific Objectives

- To design a website that encompasses efficient resort operations like reservations, check-ins, and check-outs.

- To design and develop a system dedicated to monitoring guests' reservations, providing real-time updates, and ensuring accurate tracking of reservations throughout the guest's stay.
- Thoroughly evaluate and assess the overall efficiency and performance of the developed system, considering factors such as reliability, accuracy, migration, currency, and content.

6. Significance of the Study

The resort reservation system aims to reduce the errors in manual procedure that helps to enhance the experience for both the staff and guests and emphasizes the importance of online services.

1. TO THE OWNER AND GUESTS

Owner Benefits: This study is significant for the owner of Three J's Resort as it aims to streamline and simplify the reservation and booking processes. The implementation of an efficient reservation system is expected to alleviate the owner's workload, providing a more convenient and organized approach to managing guest reservations and the potential increase in profits is a significant outcome for the owner's business success.

Guest Convenience: The significance extends to guests who will benefit from a more seamless reservation process. This improvement aims to enhance the overall experience for guests, making it easier for them to make reservations and contributing to increased customer satisfaction.

2. TO THE RESEARCHERS

Skill Enhancement: This study is valuable to the researcher as it involves the practical application of designing and developing a website with a reservation system for Three J's Resort. The project serves as an opportunity to enhance and refine programming skills, providing hands-on experience in creating solutions that address real-world challenges in the management industry.

3. TO FUTURE RESEARCHERS

Reference for Efficiency: Future researchers can use this study as a reference point for similar projects in the field of management. The insights gained from the implementation of a reservation system for Three J's Resort can guide the future endeavors, promoting efficiency in management practices within the resort industry. This study lays the groundwork for continued exploration and improvement in reservation management systems for resorts, contributing to the advancement of technology.

7. Scope and Delimitation

1. Scope

- Three J's Resort.
- Resort's Clients.
- Stable internet connection for the client and the resort.

At Three J's Resort, ensuring a stable internet connection is crucial for both the resort and its clients. This connection facilitates smooth communication

UNIVERSAL COLLEGE OF PARAÑAQUE

College of Information and Technology

and transactions between the resort and its guests, allowing for efficient booking processes, quick responses to inquiries, and seamless access to online services and amenities.

2. Delimitation

- Online payments for reservations are not considered in this research.
- Website is not optimized for mobile devices or any small-screen devices.

Chapter 2

REVIEW OF RELATED LITERATURE AND RELATED STUDIES

In this chapter, the literature review is explored, covering the methodology employed, sample size calculations, programming language choices, and analogous systems. It delves into supporting articles and journals from various studies and literary sources that bolster the development of the current system. References primarily stem from web sources, including articles, journals, and past research undertakings.

A. Related Literature

Foreign Literature

AN ONLINE RESERVATION SYSTEM

As we eat in restaurants, the nicer the food is, the more popular it becomes. A lot of people have been making reservations for their favorite restaurants for them to not wait in queues. This study shows how much of a useful tool the online reservation system is and how it affects restaurants. The online reservation system is not limited to hotels, inn, or resorts. Some are needed in other establishments. (Shah, 2000)

AN INTERNSHIP REPORT ON RESORT MANAGEMENT AND RESERVATION SYSTEM PROJECT

This project presents the analysis and design of Similana Resort office management system. This system is developed based on the job environment in the resort front office.

The scopes of the project cover all networks in resort and management team tasks. The existing system is manual-based. All the tasks are coordinated through paper and verbal contact. No reports of how the progression of each concerning tasks are made except the verbal contact. There are records on tasks history that are made through a computerized system. (Acharya, 2023)

ONLINE HOTEL RESERVATION SYSTEM

According to this study, it appears that the hotel struggles from manual transactions, the customers have to physically come to the hotel for them to have a guaranteed room. The contribution of this study is that the owner tends to their hotel's struggle and took the opportunity to create a hotel reservation system. (Bemile et al., 2014)

WEB-BASED HOTEL MANAGEMENT SYSTEM FOR HOTEL LA-VILA

La-Vila is a hotel located in Wadduwa, and is highly recommended to feel the sea breeze. The hotel expects to give the customers a better service, to accommodate more guests & give a lifetime experience as a rising hotel. The hotel is also capable of accommodating more than fifty guests at once and one banquet hall has the capacity of seating two hundred guests at once and one banquet ground with the capacity of seating three hundred guests at once. All the work is done manually and this has caused certain unexpected problems and several complaints from the customers. The management could not get proper knowledge about the sales and profit of the business. (Prarthana, 2017)

DEVELOPING AND IMPLEMENTING WEB-BASED ONLINE UNIVERSITY FACILITIES RESERVATION SYSTEM

Common organizations struggle with manual procedures on how to manage their facilities better. This study aims to solve the flawed use of facilities in halls, theaters, swimming pools, and sports venues. Additionally, based on the analysis, it appears that they proposed an online reservation system consisting of user's registration and login to solve the lack in management for the said facilities of their university. (Alkhaldi et al., 2018)

RESORT MANAGEMENT SYSTEM

These types of Online Resort Booking systems like "Resort Management System" can also help the People who are basically likely to confirm the booking before the traveling to minimize the hassle during the traveling. On the other hand, If the Hotel Management adopts the Online "Resort Management System" then the management can see the availability of the rooms and be able to give a prompt response to the customers through the Online system. (Islam, 2020)

DEVELOPMENT OF A COMPARISON BASED HOTEL AND RESORT BOOKING SYSTEM IN BANGLADESH

With the rise of population and the industrial revolution, it is obvious that hotels and resorts are increasing drastically day by day. In the 21st century, tourism is a trend. Everyone loves to travel and the reasons vary from person to person. Whether it is to have a cheerful and peaceful mind and place or business purposes, either way, hotels and resorts actually do their jobs very well. Tourism is a promising sector for any country and Bangladesh is no different. But the problem

is we have to do the hotel booking and reservation manually most of the time. (Khan et al., 2021)

RESORT TECHNOLOGY AND RESERVATION: A STUDY ON UML WEB APPLICATION EXTENSION

The intent of this paper is to verify whether the use of a more traditional software engineering technique, i.e., the Unified Modeling Language (UML) and the Web Application Extension, which has recently been added, resulted in a good design, regarding the maintainability of the application. To investigate the above factor, it was sub-divided into 3 parts, namely- documentation, extensibility and usability. These three criteria were then applied to my own web application. The maintainability was determined from the analysis of the final design. (Sharma & Goyal, 2021)

WEB-BASED INFORMATION SYSTEM DESIGN AT KASUARI EXOTIC RESORT AS MEDIA MARKETING

At this time the development of information technology is developing rapidly, where everything can be achieved and reached very practically with these technological advances. Currently, people spend a lot of their time using cellphones/smartphones to view various online media, and one of them is advertising.

Kasuari Exotic Resort, which is engaged in hospitality, feels that currently the promotion methods used have not worked effectively, therefore the Company wants to utilize information technology in marketing its hotel products which is known as Kasuari Exotic Resort in Magelang Regency. (Yusnanto et al., 2022)

DEVELOPMENT OF A WEB-BASED RESERVATION SYSTEMS FOR FEDERAL POLYTECHNIC KALTUNGCO

Lots of research indicated the usefulness of online reservation systems on hotels, inns, and resorts, recent studies shown that the online reservation not only improves the company's basic function but also the company itself. On the other hand, this study shows that the relevance of online reservation systems also applies in education in the tourism industry. (Abdulrauf et al., 2023)

Local Literature

ONLINE HOTEL RESERVATION AND MANAGEMENT SYSTEM FOR THE COLLEGE OF INTERNATIONAL TOURISM AND HOSPITALITY MANAGEMENT (CITHM)

This study aims to develop and design an on-line hotel reservation and management system for the College of International Tourism and Hospitality Management of the Lyceum of the Philippines University, Batangas Campus. It presents user-friendly features that will familiarize CITHM students on the online hotel reservation system, evaluate it and highlight the benefits it can provide to the college and staff. (Delizo & Esguerra, 2011)

THE PHILIPPINE DIGITAL STRATEGY: TRANSFORMATION 2.0: DIGITALLY EMPOWERED NATION

According to a report by the Department of Information and Communications Technology (DICT) in the Philippines, there has been a steady increase in internet penetration and digital literacy rates in the country. This growth

has led to a rising demand for web development services as businesses and organizations adapt to the digital landscape. (Department of Communications Technology, 2014)

CURRICULUM ENHANCEMENT: AN INTEGRATION AND PERCEPTION OF AMADEUS RESERVATION SYSTEM AS A COURSE OF THE INTERNATIONAL TRAVEL AND TOURISM MANAGEMENT PROGRAM OF LPU-LAGUNA

This study aimed to understand how students in the International Travel and Tourism Management Program, who took Travel and Tour Operations and Travel Agency Practicum, perceive the integration of the Amadeus Reservation System (ARS) into their curriculum, and their views on the system's features. Researchers used a descriptive approach and found that students were open to including ARS in the curriculum.

However, they lacked knowledge and experience with the system and noted issues with aligning the courses in the current curriculum. Generally, students agreed that integrating ARS would increase their tuition fees. It is recommended that the College of International Tourism and Hospitality Management (CITHM) consider integrating ARS for the benefit of current and future students at the Lyceum of the Philippines–Laguna. (Barcenas et al., 2015)

MEASURING THE QUALITY OF USER EXPERIENCE ON WEB SERVICES: A CASE OF UNIVERSITY IN THE PHILIPPINES

User Experience (UX) is getting popular as a vital success factor across many sectors and industries, including educational institutions. It is the result of the

interaction of the user, system, and context. Measuring UX is important for the purpose of having a good product or service. User Experience Questionnaire (UEQ) is one of the tools in measuring UX. (Paredes & Hernandez, 2017)

GOING DIGITAL: FROM INNOVATION TO INCLUSIVE GROWTH IN THE PHILIPPINES

The report starts by examining the key parts of the digital economy in the Philippines to understand its current state. These include the physical infrastructure for data transmission, the devices, software, and their features. It then provides detailed examples of the digital economy's benefits through case studies, like the TESDA online portal for e-education and konek2CARD for e-finance.

These case studies show that improvements in infrastructure help the digital economy grow. The report also looks at the current policies, noting that there are plans for a national broadband network in the Philippines and existing policies to protect users' privacy and data. Finally, it offers conclusions and policy recommendations to further support the digital economy in the Philippines. (Quimba & Calizo, 2018)

M-COMMERCE MODEL: AN APPLIED BUSINESS TRANSFORMATION FRAMEWORK FOR TOURISM INDUSTRY

As technology advances, e-commerce has become mainstream, offering transformation opportunities in various fields, including socio-economic development. This paper discussed the socio-economic situation of a fisherfolk community in Siquijor, Philippines, and the development of a marine sanctuary park

that provided livelihood opportunities for local fisherfolk, leading to the creation of Guiwanon Spring Park Resort.

To compete with other tourism establishments, the resort adopted an e-commerce solution to stay updated with technological advancements. The researcher developed an interactive mobile-ready application called the GSPR e-Booking System, which includes features to help the resort reach a broader online market.

Lastly, the author created a new integrated business transformation framework based on existing practices, explaining how the e-commerce solution has contributed to the socio-economic development of the community. This framework aims to encourage other developing business communities to adopt suitable solutions to address current technological challenges. (Calibo et al., 2019)

BALANGAY: NAVIGATING INNOVATION THROUGH DESIGN THINKING APPROACH FOR A BOAT RESERVATION AND BOOKING SYSTEM

A system for boat reservations and booking is pivotal for monitoring passengers, boat capacities, and cargo limits, effectively aiding in overbooking prevention and cargo tracking. Developed through an iterative approach facilitated by the Design Thinking Process, it ensures a user-centric UI/UX design. The process encompasses five phases: empathizing, defining, ideating, prototyping, and testing. In the empathizing phase, extensive research and interviews were conducted to gain insights into users' main challenges and requirements. (Banta et al., 2023)

DEVELOPMENT AND EVALUATION OF A WEB-BASED RESIDENT INFORMATION MANAGEMENT SYSTEM

The creation of a Web-Based Resident Information Management System makes it easier to store and access residents' information compared to the old methods. With this system, the barangay can efficiently perform its duties, such as planning and running various programs, and handling document requests like residence certificates and permits.

The Rapid Application Development (RAD) model was used to develop the system because it focuses on quick design and high-quality results. The system was tested and evaluated based on six ISO 25010 criteria. It received average scores of 3.48 for functional suitability, 3.62 for performance efficiency, 3.58 for compatibility, 3.42 for usability, 3.44 for reliability, and 3.51 for security. These results indicate that the system meets user requirements and is ready to be implemented. This system will help the barangay maintain residents' records more easily and provide better services. (Melendres & Aranda, 2024)

B. Related Studies

Foreign Studies

MOBILE MULTIMEDIA-CHALLENGES AND OPPORTUNITIES

Today, we observe the creation of an increasing number of multimedia consumer devices for mobile and home use. This includes set-top-boxes, game consoles, personal digital assistants (PDA), e-books, but also mobile phones. Although these devices have many things in common with desktop PCs-above all Internet access-it is widely accepted that they will serve a different purpose. (Hartwig et al., 2000)

DESIGN AND IMPLEMENTATION OF AN ONLINE AIRLINE BOOKING SYSTEM USING PHP, MYSQL, JAVA SCRIPT AND CASCADING STYLE SHEETS

This project aimed at the design and implementation of online airline booking; a system to aid in the management and operation of the customer service. Online airline booking system is one of the essential applications of E-commerce. With the development of internet and security technology, more and more people begin to consume online, which is more convenient and personal than traditional way. (Elias & Fredrick, 2009)

A WEB-BASED SYSTEM FOR HOTEL RESERVATION IN KENYAN HOTELS CASE STUDY: WHITESANDS HOTEL- MOMBASA

Due to congestion of customers in booking one to one at the White sands Hotels premises, the Web Based Hotel Reservation System for White Sands Hotels-Mombasa is developed to handle the Hotel booking procedure better than one to one booking, which is limited to most users from a far. The website is designed using PHP by connecting to the Hotel database using MySQL making it to be a dynamic site. White sands Hotel is found in Mombasa, along the Kenyan coast. (Salome & Jared, 2009)

CMS-BASED WEB-APPLICATION DEVELOPMENT USING MODEL-DRIVEN LANGUAGES

Content management systems (CMS) are typically regarded as critical software platforms for the success of organizational web sites and intranets. Although most current CMS systems allow their extension through the addition of

modules/components, these are usually built using the typical source-code-oriented software development process, which is slow and error-prone. On the other hand, a MDE-oriented development process is centered on models, which represent the system and are used to automatically generate all corresponding artifacts, such as source-code and documentation. (Saraiva & da Silva, 2009)

AN EXPLORATORY STUDY OF WEBSITE INFORMATION CONTENT

This study describes and demonstrates the Website Information Content Survey (WICS), which is intended to provide practitioners and researchers with a means of systematically describing website information content. In an exploratory survey of twenty business-to-consumer websites across five e-commerce domains, we demonstrate how the survey can be used to make cross-website comparisons that can identify potential gaps in a website's information content. (Hasley & Gregg, 2010)

THE IMPACT OF ONLINE RESERVATION SYSTEMS: FOR CHAIN RESTAURANT

Restaurants have used various methods for making reservations in order to maximize the cover count for their particular restaurant. Online reservations systems have made it easy for restaurants to create a table layout specific to their restaurant and to manage their reservations, as well as the table seating during service. (Smith, 2011)

SECURITY MODEL EVOLUTION OF PHP WEB APPLICATIONS

Web sites are often a mixture of static sites and programs that integrate relational databases as a back-end. As they evolve to meet ever-changing user needs, new versions of programs, interactions and functionalities may be added and existing ones may be removed or modified. Web sites require configuration and programming attention to assure security, confidentiality, and trust of the published information. (Letarte et al., 2011)

THE IMPACT OF WEBSITE INFORMATION CONVENIENCE ON E-COMMERCE SUCCESS OF COMPANIES

Nowadays where there is a huge competition among the online retailers, more and more services and products are added to online businesses to increase shopping convenience for customers, like free delivery for twenty-four hours, online payment, and pick up services in the dedicated convenience stores and more. Many e-commerce researchers have found and selected convenience as an important factor at online shopping and consumer behaviour. (Salehi et al., 2012)

WEB ACCESSIBILITY STANDARDS AND DISABILITY: DEVELOPING CRITICAL PERSPECTIVES ON ACCESSIBILITY

Currently, dominant web accessibility standards do not respect disability as a complex and culturally contingent interaction; recognizing that disability is a variable, contrary and political power relation, rather than a biological limit. Against this background there is clear scope to broaden the ways in which accessibility standards are understood, developed and applied. (Lewthwaite, 2014)

EFFECTIVENESS OF WEBSITE PERSONALIZATION: DOES THE PRESENCE OF PERSONALIZED RECOMMENDATIONS CANNIBALIZE SAMPLING OF OTHER ITEMS?

With advances in personalization technologies, websites are increasingly able to customize Web content and provide users with a unique experience. Prior research has focused more on the appeal of the personalized recommendations themselves and examined user behavior toward the personalized recommendations. However, prior research has not compared the total volume of users' sampling activity on websites that offer personalization, compared to those that do not. (Bodoff & Ho, 2015)

STATE-OF-THE-ART, CHALLENGES, AND OPEN ISSUES IN THE INTEGRATION OF INTERNET OF THINGS AND CLOUD COMPUTING

The Internet of Things (IoT) is a paradigm based on the Internet that comprises many interconnected technologies like RFID (Radio Frequency Identification) and WSN (Wireless Sensor and Actor Networks) in order to exchange information. The current needs for better control, monitoring and management in many areas, and the ongoing research in this field, have originated the appearance and creation of multiple systems like smart-home, smart-city and smart-grid. (Diaz et al., 2016)

DIGITAL SHARING PLATFORMS: SUCCESSFUL DESIGN: UX ANALYSIS OF SUCCESSFUL DIGITAL SHARING PLATFORM MARKET LEADERS

Digital sharing platforms have become widely more popular during the last century as smartphones have become an everyday gadget for almost everyone

around the world. Digital sharing platforms have taken a lot of inspiration from different types of e-commerce marketplaces that have already existed for a long time. They have spread to almost all e-commerce sectors, ranging from platforms offering 2nd hand marketplaces to vehicle and space renting. (Koskenvita, 2022)

CHALLENGES IN FRONT-END JAVASCRIPT DEVELOPMENT FOR WEB APPLICATIONS DEVELOPERS' PERSPECTIVE

Front-end development has become an integral part of web development. It has consistently gained popularity among developers in recent years, with React being part of this popularity. As this popularity continues to rise, developers in this field also encounter increasing challenges. As developers play significant roles in web development, their feelings and thoughts towards their work matter. (Yunita, 2023)

Local Studies

eWOM EFFECTS ON HOTEL BOOKING INTENTIONS, ATTITUDES, TRUST, AND WEBSITE PERCEPTIONS

The objective of the study is to examine the effect of comments generated on Facebook on the choice of a hotel. More specifically, it focuses on the study of the influence of comments written by Facebook friends on the intentions of booking a hotel, the trust in the hotel, the attitude toward the hotel, and the perception of its website. (Ladhari & Michaud, 2015)

MANAGING CUSTOMER RESERVATIONS OF BULSU HOSTEL THROUGH THE DEVELOPMENT OF ONLINE INFORMATION AND RESERVATION SYSTEM

Accurate and timely reservations are essential for providing proper service and a positive customer experience in many service-oriented businesses. This study focused on factors such as customer satisfaction and positive experiences at a hostel, starting with the reservation process. To manage customer reservations at the Bulacan State University (BulSU) Hostel, the researchers designed and developed an "Online Information and Reservation System for BulSU Hostel."

The system includes various features like creating different user accounts for staff and customers, updating prices through an online admin portal, making payments through a bank account, email confirmation after reservations, generating reports on income, customer numbers, monthly reports, tracking viewer numbers, and settings for rates, taxes, and discounts. Visual Basic .Net and ASP. Net were used for the front-end, Microsoft Access for the database, and Crystal Report for displaying reports. The system was evaluated using the ISO 9026 software quality standard based on functionality, accuracy, reliability, user-friendliness, and security, and all criteria were rated as "Acceptable" according to the Likert scale. (Castro & Custodio, 2016)

EFFECTS OF COMPUTER RESERVATION SYSTEM IN THE OPERATIONS OF TRAVEL AGENCIES

In travel industry, the main tool used is the computerized booking systems and now known as Global Distribution Systems or GDS. This paper aimed to determine the effect of using Computer Reservation System among Travel Agencies in terms of technical, human and financial aspect. This will help the Internship

office to include the identified travel agencies in their linkages where the students will be deployed for internship. (Felicen & Ylagan, 2016)

EVALUATION OF THE SELECTED PHILIPPINE E-GOVERNMENT WEBSITES' PERFORMANCE WITH PRESCRIPTIVE ANALYSIS

Information and Communication Technologies (ICT) have the potential to transform the political landscape by engaging citizens in the governance process. The conduct of valuation on Government websites' performance, acclimates to our country's productivity development of the government requirements, contributes to promoting the government websites of constant improvement on quality service. (Salvio & Palaog, 2019)

DEVELOPMENT OF THE MASDAN MOBILE APPLICATION AND WEB-BASED GIS INTERFACE FOR THE MONITORING AND MANAGEMENT OF THE MANILA BAY ENVIRONMENT

This paper presents the development of MASDAN, an integrated platform consisting of a mobile application and a web-GIS interface for monitoring the Manila Bay environment. The MASDAN mobile application uses citizen science and Volunteered Geographic Information (VGI) to collect data on specific environmental issues. (Narciso et al., 2021)

SECURED COTABATO CITY STATE POLYTECHNIC COLLEGE WEB-BASED STUDENT CLEARANCE SYSTEM

The study describes the Secured CCSPC Web-Based Student Clearance System's use and predicted effects. Hypertext Transfer Protocol (HTTP), Hypertext Preprocessor (PHP), Sublime editor, Bootstrap, and MySQL as the database tool were used to create the clearance system. (Daud & Maguid, 2022)

C. Overview of Current Technology

The latest technological advancements applied in studies similar to the present one are presented, complete with appropriate citations and source references to acknowledge the authorities and sources utilized.

Table 1. Similarities and Differences of the Latest Technology applied in the Study

TITLE	SIMILARITIES	DIFFERENCES
An Online Reservation System	Both companies implemented a reservation system.	Researchers used PHP, HTML, JavaScript, and CSS as software which differs from them as they only used Java.
Developing software for resort business	Both companies struggled from manual-based and are now proceeding to computerized work.	Researchers did not use Visual Basic as a software for their system.

Online Hotel Reservation System	Both used PHP, CSS, HTML, and JavaScript as software requirements for the system.	Researchers' system differs from theirs as MySQL was not included in their software.
Web-Based Hotel Management System for Hotel La-Vila	Both systems used PHP as a software requirement.	Researchers did not use MySQL, Apache, NetBeans IDE, and Photoshop.
Developing and Implementing Web-based Online University Facilities Reservation System	Both systems are Web-Based.	They used UML, MySQL, and Visual Basic as programming languages while the researchers did not.
Resort Management System	Both systems are intended for resort management.	The researchers did not use Java as a software requirement.
Development of a Comparison Based Hotel and Resort Booking System in Bangladesh	Both used PHP and HTML as a software requirement.	Researchers did not use XML as a software requirement in their system.

Resort Technology and Reservation: A study on UML Web Application Extension	Both systems designed a website and reservation system.	Researchers did not use UML as a software requirement.
Web-Based Information System Design at Kasuari Exotic Resort as Media Marketing	Both systems created a website as a marketing medium. Additionally, both used PHP as a programming language.	Researchers did not use Waterfall, MySQL, and UML as software requirements.
Development of a Web-Based Reservation Systems for Federal Polytechnic	Both systems used PHP, HTML, CSS, and JavaScript as software requirements.	Researchers did not use UML as a software requirement.
The State of Web Development Technologies	The usage of JavaScript, MySQL, and CSS.	Researchers did not use other frameworks like bootstrap etc. Python is not included in the system's programming.

D. Synthesis

In the synthesis of various studies focusing on the development of online reservation systems for resorts and hotels, several commonalities and differences emerge among the systems implemented by different researchers:

1. Commonalities:

- a. Many of the studies involve the implementation of online reservation systems for resort or hotel management.
- b. Software technologies such as PHP, HTML, CSS, and JavaScript are commonly used across multiple studies for system development.
- c. The transition from manual-based reservation systems to computerized solutions is a shared challenge addressed by the researchers.
- d. Web-based platforms are prevalent in the systems developed, reflecting the industry's shift towards online booking and management solutions.

2. Differences:

- a. The studies collectively underscore the importance of technological innovation in streamlining resort and hotel management processes, particularly in the realm of reservations.
- b. Flexibility and adaptability in software selection and system design are crucial for meeting the unique needs and requirements of different resort establishments.
- c. While there are common trends in software technologies and system functionalities, there is no one-size-fits-all approach to developing

online reservation systems, as evidenced by the diversity of methodologies and tools employed across the studies.

3. Key Insights:

- a. The studies collectively underscore the importance of technological innovation in streamlining resort and hotel management processes, particularly in the realm of reservations.
- b. Flexibility and adaptability in software selection and system design are crucial for meeting the unique needs and requirements of different resort establishments.
- c. While there are common trends in software technologies and system functionalities, there is no one-size-fits-all approach to developing online reservation systems, as evidenced by the diversity of methodologies and tools employed across the studies.

Overall, the synthesis of these studies provides valuable insights into the multifaceted nature of online reservation system development within the hospitality industry, highlighting both common practices and areas of divergence among researchers.

Chapter 3

METHODOLOGY

This chapter encompasses the methodology and approach employed by the researchers to construct the system. The system development process adheres to various distinct phases, each of which plays a pivotal role in realizing the research objectives. This chapter offers a comprehensive interpretation of each phase.

A. General Method Used

Agile methodology is a gradual and iterative approach to software development that prioritizes user input, adaptability, and customer's feedback.

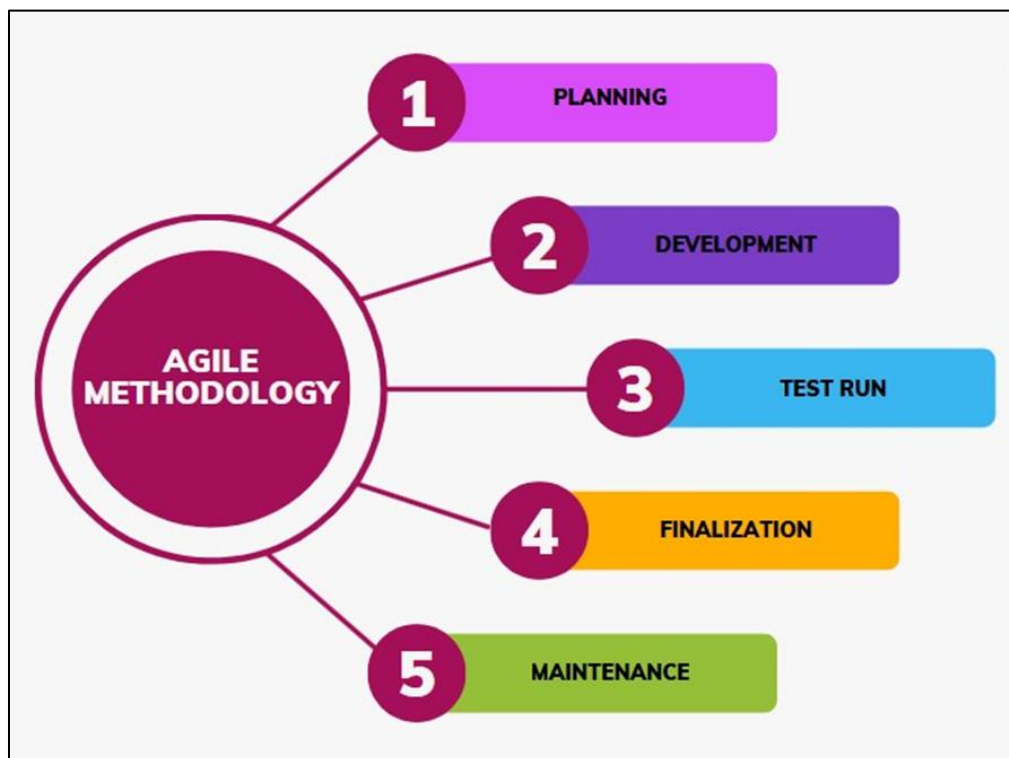

Figure 2. Agile Methodology

B. Methodology

The Agile method was used in this study categorized in 5 phases: planning, development, test run, finalization, and maintenance. It was a great option for creating a reservation system since it works well for projects whose needs could change over time.

- **Planning**

Researchers aimed to initiate and discover the requirements for a user-friendly resort reservation system, seeking to address manual procedures within the company. The focus was on identifying essential features such as a resort website, customer registration, room booking, and a chat-bot.

The researchers carefully assessed the needs of both the company and potential customers to ensure that the reservation system would effectively process.

- **Development**

The researchers concentrated on the development of core functionalities, translating the identified features into tangible components of the reservation system. The emphasis during this phase was on coding and programming to create a seamless user experience.

The goal was to transform conceptual ideas into functional features, with a particular focus on the user interface's intuitiveness.

- **Test Run**

As the development progresses, it involves testing the reservation system with a limited user base to gather essential feedback. This will

include evaluating the system's usability for both staff and customers, assessing its overall performance, and identifying any issues that will be needing resolution. The feedback collected during this phase will play a crucial role in refining and improving the system.

- **Finalization**

Researchers focused on finalizing the reservation system and addressing any issues identified during testing. This will involve refining the user interface based on feedback, conducting thorough testing for stability, and preparing for the official launch of the system.

- **Maintenance**

Researchers monitored the system's performance, observed regular operations, and implemented updates or additional features based on ongoing feedback and evolving needs. This iterative approach aimed to ensure the system's long-term success by adapting to changing requirements and maintaining optimal performance. The structured approach from initiation to post-launch enhancements will underscore the researchers' commitment to delivering a user-friendly resort reservation system.

C. Research Problem

Introducing a chat-bot automated system might require researchers to invest time in understanding and learning how to operate the system. Training sessions and familiarization with the functionalities of the chat-bot could contribute to the perceived increase in workload.

D. Statistical Treatment of Data

When researchers approached the owners and 34 clients about the prospect of upgrading to an online reservation system, it marked a pivotal moment in the ongoing efforts to enhance operational efficiency. The inquiry stemmed from a recognition of the limitations inherent in the existing manual reservation processes. Researchers sought to engage the owners in a conversation that would shed light on the potential benefits and challenges associated with transitioning to a digital platform. See Appendix F for the sample survey questionnaire.

E. The Study

1. Description of Existing Process

Clients will initiate a conversation in the company through the website to state their demands about booking a room, they are to present their details such as name, contacts, preferred room, and schedule of stay. The staff then will confirm the registration of the client, after everything is said and done, the inquirer will be informed that their date is scheduled and reserved for them.

2. Diagram of Existing Process

Figure 3. 3J's Resort Existing Process

3. Description of Proposed Process

The reservation would be processed in the website online, guests will browse through the Three J's Resort's website for booking as a way of registering, guests will then state their details of stay to the staff as they save all the information that is stated by the guest to later be confirmed and orient them that they are scheduled.

4. Diagram of Proposed Process

Figure 4. 3J's Resort Proposed Process

F. Design Issues

Researchers are having challenges adapting the website design from mobile views. Browsing from mobile devices differs from searching in computers, it fails to have the same spacing as mobiles have smaller screen, varying resolutions, and touch-screen interface. As a result, researchers are trying every possible solution to ensure optimal user experience across different devices.

G. Analysis and Critique

1. Realistic Constraints

Table 2. Technical and Operational Constraints

CONSTRAINTS	MANIFESTATION AND ACTIONS
Technical	A web browser is needed to navigate the system. It also implies that, since the system is web based, to access it, it must have internet connection.
Operational	The system does not need any professional technology for the admin to operate or use the system, though what needs to be looked upon is how to properly use the system as the admin must be oriented on how the system would work.

2. Standards Used

Table 3. ISO Standard Used in the System

ISO STANDARD	DESCRIPTION	APPLICATION
ISO/IEC 25010	It provides the leading models for assessing software product. This is an important contribution towards establishing the delivery performance of software processes and proposed improvements.	This standard served as the guidelines to test the system quality characteristics.

	This paper explores the scope and interpretation of the ISO/IEC 25010 quality models, in the light of this broad, lifetime service-oriented view, also identifying other significant aspects of product that concern acquirers of software, and for which quality requirements and quality evaluation are potentially needed.	
--	--	--

3. Hardware and Software Specifications

Table 4. Minimum and Maximum Hardware and Software Specifications

SYSTEM REQUIREMENTS	MINIMUM SPECIFICATION	RECOMMENDED SPECIFICATION
Computer	Desktop/Laptop Computer Specs Requirement: OS • Windows 7 • macOS Processor • AMD A4 6300 or Intel Core i5 2nd gen Memory • 2 GB	Desktop/Laptop Computer Specs Requirement: OS • Windows 10 • macOS Monterey Processor • I7 9th gen or AMD Ryzen 5 Memory • 16 GB

Smartphone	Android phone Specs Requirement: CPU • Quad Core 1.2GHz RAM (GB) • 1 GB	Android phone Specs Requirement: CPU • Octa Core RAM (GB) • 2 GB
	IOS phone Specs Requirement: Chipset • Apple A8 CPU • Dual-core 1.4 GHz Typhoon RAM • 1 GB Connection • Wi-Fi and 4G (data services) to be able to work with data services.	IOS phone Specs Requirement: Chipset • Apple A16 CPU • Hexa-core (2x3.46 GHz Everest + 4x2.02 GHz Sawtooth) RAM • 1 GB Connection • Wi-Fi and 4G (data services) to be able to work with data services.

SOFTWARE		
Browser	Computer	Computer
	• Google Chrome • Microsoft Edge • Mozilla Firefox • Opera	• Google Chrome • Microsoft Edge • Mozilla Firefox • Opera
	Smartphone	Smartphone
	• Google Chrome • Safari • Mozilla Firefox • Opera	• Google Chrome • Safari • Mozilla Firefox • Opera

4. Tangible and Intangible Benefits

Table 5. Tangible and Intangible Benefits of the System

TANGIBLE BENEFIT	INTANGIBLE BENEFIT
The Three J's Resort website offers convenience to both clients and staff. By providing an online platform for booking rooms, clients can easily browse available options, compare prices, and make reservations at their own	When clients book a room on a designated date, the room will not be reserved for them unless they pay for it. As a result, they can expect that the room they took will be assured for them

convenience, without the need to visit or call the resort directly.	without worrying it could be taken by another client.
---	---

H. Implementation Issues

The researchers have observed the following issue may occur during implementation:

- The website's design seems to appear different in mobile than PC due to missing functions.

Chapter 4

INTERPRETATION OF DATA ANALYSIS

This chapter shows the interpretation of data gathered during software testing.

A. Functionality Testing

The system's primary features were all put to the test by the researchers. All the tested functions passed, indicating that the system is operating as intended. The navigation bar, which includes options for home, about us, contact us, booking, date of booking, client details, QR payment, admin login/logout, reservation list, inquiries, package list, reservation report, user list, and website settings.

In conclusion, the described navigation bar covers a broad spectrum of features necessary for a booking and reservation management system, ensuring users can easily navigate and utilize the platform efficiently. See Appendix C.

B. Compatibility Testing

Table 6. Overall Compatibility Testing Results

HARDWARE	GOOGLE CHROME		MOZILLA FIREFOX		SAFARI (IOS)	
	Client	Admin	Client	Admin	Client	Admin
Desktop/Laptop	Passed	Passed	Passed	Passed	N/A	N/A
Mobile iPhone XS	Passed	Passed	N/A	N/A	Passed	Passed

The result of the compatibility testing conducted by the researchers. The testing consists of three browsers such as Google Chrome, Mozilla Firefox and Opera Mini. The testing cases are composed of 14 test cases per browser which are a major function of the system. The test cases are divided into 7 user functions and 7 admin functions, on the desktop testing all major functions on all 3 browsers wherein all 14 functions are proved to be working properly. The compatibility of the system works perfectly in hardware devices such as mobile, computer, and laptop. Additionally, the system also works in any browsers included. See Appendix D.

C. User Acceptance Testing

Table 7. User Acceptance Testing Results

30 TEST RESULTS	Agree	Neutral	Disagree
Functionality	100%	0%	0%
Compatibility	100%	0%	0%
User Acceptance	93.3%	6.7%	0%

Based on the results of the User Acceptance Survey (Appendix F) that the researchers have conducted for 30 testers, they agreed that the system is functional (100%) wherein almost all 150 question (5 per tester) related to the functionality of the system agreed to be working. The testers also agreed that the system is compatible (100%) wherein all 68 questions (2 per tester) related to the compatibility of the system are working as intended. For user acceptance, the testers agreed that (93.3%) 118 out of 120 questions (4 per tester) the system is acceptable for the clients.

Chapter 5

CONCLUSIONS

The researchers were able to design and develop a website that can be used by the possible clients to book their staycation room online, utilizing user information for transactions involving different methods of payment. The system is capable of a real time reservation system. The researchers were able to test all the functions available on the system. Overall, the system is showing all the expected system response except the display in mobile phones. The manual procedures inherent in reservation processes within certain resorts have precipitated inefficiencies, booking errors, and missed revenue opportunities. Such manual reservations often pose challenges for guests, impeding their ability to make bookings smoothly, while resort staff grapple with managing reservation details, ultimately resulting in a subpar guest experience and income loss for the establishment. The transition from manual to automated website reservation systems in the resort business prompts inquiries into its effectiveness and impact.

This capstone project endeavors to delve into the challenges and benefits associated with this transition, with a focal point on its influence on operational efficiency, staff, and guest experiences, as well as overall profitability and satisfaction in resort management. The overarching aim is to furnish practical insights and recommendations for the successful adoption of automated reservation systems within the industry.

In evaluating the Three J's Resort website and reservation system, respondents must consider several key aspects. Firstly, in terms of reliability, the system's uptime and availability must be scrutinized to ascertain if it consistently operates without significant downtime. Additionally, the robustness of the infrastructure warrants assessment to determine if mechanisms are in place to handle unexpected failures and

ensure continuous operation, alongside evaluating the system's ability to recover from failures gracefully while maintaining data integrity. Accuracy stands as another crucial facet, where the precision of data processing and calculations should be examined for consistent reliability and error-free results, while the adequacy of data storage and retrieval must be appraised to ensure data is stored securely and retrieved accurately as needed.

Migration efficiency also demands scrutiny, with an evaluation of whether data was migrated effectively from manual to the new platform, along with assessing the compatibility of data formats and structures between the manual booking and website reservation system, and identifying any data transformation or conversion issues encountered during migration. Moreover, the impact of migration on system performance and functionality necessitates consideration, focusing on whether the migration process disrupted normal operations and if any issues were promptly addressed and resolved.

Regarding currency, attention should be directed towards assessing the timeliness of data updates and content refresh, as well as the accuracy of time-sensitive information such as event schedules or pricing details, with a view to ensuring changes are promptly reflected on the website to maintain currency. Furthermore, the relevance of content to current trends, developments, and user needs should be evaluated to ascertain if the website's content is updated to remain pertinent and engaging to users.

Lastly, in evaluating content, considerations should be made regarding the quality and relevance of website content, its presentation clarity, and user-friendliness, alongside assessing the accuracy and credibility of information provided, including source citation and factual verification. Additionally, the comprehensiveness of content coverage must be evaluated to determine if the website provides sufficient information to meet the needs of its target audience.

UNIVERSAL COLLEGE OF PARAÑAQUE

College of Information and Technology

Based on the results of this comprehensive assessment, several recommendations can be proposed for the improvement of the Three J's Resort and its reservation system. These may include implementing measures to enhance system reliability and uptime, addressing any data migration issues promptly, ensuring timely updates and accuracy of information on the website, and refining the quality and relevance of content to better meet user needs. Moreover, investing in staff training and support to maximize the benefits of the automated reservation system and improve overall guest satisfaction could also be beneficial.

Chapter 6

RECOMMENDATIONS

For further improvements, the researchers recommend the following:

1. Figure out how to store all the information about reservations in a way that makes sense. This could involve organizing data and making sure it is easy to find.
2. Design the part that users will interact with, like the website as the main example. Make it easy to use and nice to look at.
3. Make sure everything is protected from hackers and that only the right people can access it. This involves things like making sure passwords are secured.
4. Write down how to use the system so that everyone understands. Teach people how to use it if they need help.
5. Link up the system with other tools, like payment processors or messaging services. This helps everything work smoothly together. Try out all the different parts of the system to make sure they work like they should. Fix any problems you find.

Three J's Resort Survey

B I U ↺ ↻

Form description

FUNCTIONALITY

Description (optional)

Ease of Use: The website's reservation process is straightforward and user-friendly. *

☐ Agree

☐ Neutral

☐ Disagree

Booking Flexibility: The website offers a variety of booking options (e.g., room types, packages) to cater to different preferences. *

☐ Agree

☐ Neutral

☐ Disagree

Payment Convenience: The payment methods provided on the website are convenient and secure. *

☐ Agree

☐ Neutral

☐ Disagree

Information Clarity: The website provides clear and comprehensive information about resort amenities, room details, and policies. *

☐ Agree

☐ Neutral

☐ Disagree

Notification Effectiveness: The website sends timely notifications (e.g., booking confirmations, reminders) via email or SMS. *

☐ Agree

☐ Neutral

☐ Disagree

Figure 26. UAT Functionality Survey

COMPATIBILITY
Description (optional)

...

Device Compatibility: The website functions well across different devices (e.g., desktops, tablets, smartphones).

☐ Agree

☐ Neutral

☐ Disagree

Browser Compatibility: The website displays properly on various web browsers (e.g., Chrome, Firefox, Safari, Edge).

☐ Agree

☐ Neutral

☐ Disagree

Figure 27. UAT Compatibility Survey

USER ACCEPTANCE
Description (optional)
Overall Satisfaction: Overall, I am satisfied with the experience of using this website for resort reservations.
☐ Agree
☐ Neutral
☐ Disagree
Likelihood to Recommend: I would recommend this website to others for booking resort accommodations.
☐ Agree
☐ Neutral
☐ Disagree
Intent to Reuse: I am likely to use this website again for future resort bookings.
☐ Agree
☐ Neutral
☐ Disagree
Perceived Value: The website provides good value for money based on the booking experience and resort offerings.
☐ Agree
☐ Neutral
☐ Disagree

Appendix G. Interview Transcription with 3J's Resort Owner

Date of Interview: November 11, 2023

Interviewer: Good Afternoon Ms. Rocil, My group and I would like to thank you for approving our proposal

Client: You're welcome, and thank you for choosing our resort, the system that you are proposing will very much help us.

Interviewer: We will first make a sample website, after that we will present it to you, and you can give us your feedback for changes you want to make.

Client: Alright

Interviewer: I'll just message you if I have any questions about the resort details.

Client: Got it.

Appendix H. Grammarian Certification

CERTIFICATE OF LANGUAGE EDITING

This is to certify that the research study entitled, **A PROPOSED WEBSITE AND RESERVATION SYSTEM FOR THREE J'S RESORT**, by **Jason Marc M. Justiza, Ralph Ranier S. Lopez, Jose Alberto D. Pagharion and Alan Jr. L. Salongcong**, was reviewed and edited for proper English language aligned with its set of structural rules governing the composition of sentence, phrase and words. Neither the research content nor the author's intentions were altered in any way during the editing process.

Signed this 11th day of July, 2024 at Parañaque City.

Ailene F. de Leon, LPT

Figure 38. Inquiries Page

UNIVERSAL COLLEGE OF PARAÑAQUE

College of Information and Technology

The screenshot displays a web application interface for managing package deals. On the left is a red sidebar with navigation links: Dashboard, Reservation List, Inquiries, Cancellation Request, Pages, Package List, Reports, Reservation Report, Maintenance, User List, Settings, and Chatbot Settings. The main content area is titled 'List of Package deals' and includes a '+ Add New Deals' button. Below the title is a table with columns: #, Date Created, Name, Description, Price, Status, and Action. The table contains three entries. At the bottom, it says 'Showing 1 to 3 of 3 entries' with 'Previous' and 'Next' navigation links.

#	Date Created	Name	Description	Price	Status	Action
1	2024-04-05 18:31	Package 1 (10pax)	This Package Includes 2 bedrooms with bunkbeds and a Cottage free use of...	10000	Active	Action
2	2024-04-20 13:03	Package 2 (15 pax)	This Package Includes the following:	12500	Active	Action
3	2024-06-07 03:09	Test Package	Test Description	20000	Active	Action

Figure 39. Package Setup/Configuration Page

The screenshot shows the 'Reservations Reports' section of the application. It features a 'Filter' section with 'Date From' (01/07/2024) and 'Date To' (06/07/2024) fields, along with 'Filter' and 'Reset' buttons. Below the filter is a table with columns: #, Code, Reservoir, Reservation Details, contact, and Status. The table displays one reservation entry for Kim Gaylis. The 'Reservation Details' column is expanded to show check-in/out times, package name, and reference number. The 'contact' column shows phone and email information. The status is 'Confirmed'.

#	Code	Reservoir	Reservation Details	contact	Status
1	202406-0005	Kim Gaylis	In: 2024-06-29 15:00:00 Out: 2024-07-05 13:00:00 Package 1 (10pax) Reference: Z567899000099	Telephone Num: 09491404863 Email: kimgaylis@gmail.com	Confirmed
